SUMMARY

Java Backend Engineer with 4 years of experience building scalable, high-performance microservices using Java and Spring Boot. Strong in REST APIs, distributed systems, and asynchronous processing. Proven track record of improving performance, optimizing systems, and resolving production issues in enterprise environments.

EXPERIENCE

Tata Consultancy Services — Systems Engineer

Jul 2022 – Present | Indore, India

- Designed and developed microservices using Java and Spring Boot, supporting high-volume enterprise systems and improving scalability.
 - Built and integrated RESTful APIs, enabling seamless communication across distributed services.
 - Implemented asynchronous communication using Spring WebClient, reducing latency and improving throughput.
 - Developed Spring Batch ETL pipelines, improving batch performance by 40%.
 - Optimized database queries and indexing in Oracle/PostgreSQL, reducing API response time by 30%.
 - Implemented event-driven architecture using Kafka and RabbitMQ, improving system scalability and decoupling.
 - Wrote unit and integration tests using JUnit and Mockito, improving code reliability.
 - Deployed and managed containerized microservices using Kubernetes, ensuring scalability, high availability, and efficient resource utilization.
 - Implemented authentication and authorization using JWT for securing REST APIs.
 - Worked with API Gateway and service discovery for managing microservices communication.
 - Built and maintained CI/CD pipelines for automated build, testing, and deployment.
 - Diagnosed and resolved production issues, improving system reliability by 20%.
 - Conducted code reviews and enforced best practices, improving maintainability.
 - AWS services such as EC2, S3, and EKS deployment.
 - Monitored application logs and performance to troubleshoot issues and ensure system stability.
 - Leveraged GitHub Copilot for AI-assisted development, increasing development speed.
-

Agnito Technologies — Software Development Engineer

Aug 2021 – Dec 2021 | India

- Developed backend APIs and supported frontend components for web applications.
 - Assisted in database operations, API integration, and testing.
 - Participated in code reviews to improve code quality.
-

PROJECTS

Scalable Event-Driven Data Processing Platform

- Designed and built a **microservices-based data processing platform** using Java, Spring Boot, Kafka, and PostgreSQL to handle high-volume enterprise data.
 - Processed **5M+ records/day** through Spring Batch pipelines with parallel processing, reducing total processing time by **45%**.
 - Implemented **event-driven architecture** using Kafka, handling **10K+ messages/min** with reliable, asynchronous communication between services.
 - Optimized database queries and indexing strategies, reducing data retrieval latency by **35%**.
 - Developed RESTful APIs for ingestion and reporting, supporting **multiple downstream systems and real-time analytics use cases**.
 - Ensured system reliability with retry mechanisms, error handling, and monitoring, achieving **99.9% job success rate**.
-

SKILLS

Languages: Java, Go

Frameworks: Spring Boot, Spring MVC, Spring Batch, Spring Security, Hibernate, JPA, Web Flux, Spring Cloud

Architecture: Microservices, Distributed Systems, Event-Driven Architecture

Databases: Oracle, PostgreSQL, SQL Query Optimization

Messaging: Kafka, RabbitMQ

Tools: Git, Maven, Jenkins, Docker, GitHub Copilot, Postman, Swagger

Testing: JUnit, Mockito

Practices: CI/CD, Agile, SOLID, Clean Code, TDD

Cloud: AWS

EDUCATION

Bachelor of Engineering (Computer Science)

Sagar Group of Institutions, Bhopal | 2022

CERTIFICATIONS

AWS Certified Developer - Associate

ACHIEVEMENTS

Technical Excellence Award | Contextual Master Award
